Let's compare the climates in four cities around the world. Nagoya is in the northern half of the earth. The other three cities are in the southern half. So August is hot in Nagoya, but cool or cold in the other cities.

5 The charts here show the climates of the four cities. Chart 1 shows the temperature and the amount of rain and snow in Nagoya. In Nagoya, the average temperature in August is over 25°C. There is a lot of rain in June, July, and September. In September, Nagoya has about 250mm of rain.

10 The warmest city of the four in winter is Brisbane, Australia. It has more rain in summer than in winter, and the amount of rain in February is the greatest in the year. Wellington, New Zealand, has a lot of rain in winter. The amount of rain and snow in a year is greater than the amount in Capetown, South Africa. Capetown is the driest city of the four. It rains very little in summer there.

Can you tell which chart shows which city's climate? (181 words)
